

InitML - ClipDrop - Improve Product image for online stores at scale.

Research and Development Internship

Flexible starting date

Location: remote

InitML gives superpowers to turn anyone into a world-class designer. No one but ML should do repetitive image manipulation.

We are on a mission to create tools for B2C and B2B that automate image creation, focusing on one vertical at a time. Our 2 first products are [ClipDrop](#) & [Cleanup.pictures](#)

Mission

You will design, architect, and develop end to end, a solution that can improve the quality of 1.7M online stores.

You'll scrape all the Shopify stores automatically, and you'll detect which ones have product images that can be improved using ML with the support of our ML teams.

You'll process all product images automatically and generate a before/after picture that shows the difference visually with the support of our ML teams that are developing SOTA algorithms doing Matting, Background removal, inpainting,

Bonus point for a tool integrated with Shopify that helps online store owners to apply the changes in a few clicks.

We believe this internship can have a massive impact due to its scale: Millions of merchants, Billions of images to process.

Profile

You don't wait to be told what to do. You love to create proof of concepts and minimum viable products.

You are comfortable learning new languages, technologies, and systems to use the right tool for the job. (e.g. AWS, GCP, Kubernetes, Docker, Python, Node.js).

Perks

You'll work into a workplace run on trust, empowerment, and feedback, a positive, inspiring working atmosphere.

Competitive Internship compensation.

We'll offer mentoring and personal development opportunities and an international team of experts.

We celebrate diversity and are committed to building teams that represent a variety of backgrounds, perspectives, and skills. All employment is decided based on qualifications, merit, and business need.
